Money Management

- Position Sizing:
 - Understand “how much” money to trade on each position
 - Know account size & available funds
 - Determine maximum risk per position
- Expectancy:
 - How much to make (win or lose) for every dollar risked?
 - How many trades - how much opportunity?
 - $\text{Expectancy} = (\text{Probability of Win} * \text{Average Win}) - (\text{Probability of Loss} * \text{Average Loss})$
 - $(0.4 * \$2,500) - (0.6 * \$625) = \$1,000 - \$375 = \$625$ per trade
 - $(40\% * 20\%) - (60\% * 5\%) = 5.00\%$
 - 100k account, \$12,500 per position or 1% risk:
 - Win 40% of time, 20% ave gain, 5% ave loss

“The golden rule of trading is to keep losses at a level of 1 R as often as possible and to make profits that are high-R multiples.” - Van K. Tharp

“A trading philosophy is something that cannot just be transferred from one person to another; it’s something that you have to acquire yourself through time and effort”

- Richard Driehaus

“The way to build long-term returns is through preservation of capital and home runs”

- Stanley Druckenmiller

In Closing...

- Trading Rules to Live by:
 - Cut Losses
 - Ride Winners
 - Keep bets small and manage risk
 - Follow the rules without question (your proven system)

“The elements of good trading are: (1) cutting losses, (2) cutting losses and (3) cutting losses. If you can follow these three rules, you may have a chance.”
